

SMARK MART

CUSTOMER USER GUIDE

A simple guide from trolley selection to checkout

[CLEAR STEPS](#) • [SCREEN HELP](#) • [SHOPPING TIPS](#)

Your shopping journey

- 01 Choose a trolley
- 02 Scan your products
- 03 Review your cart
- 04 Choose a payment method
- 05 Finish with store staff

Made for first-time shoppers

Your shopping journey

Follow these steps in order for a smooth first visit.

01	Start shopping	Open Smark Mart and scan the QR code on your trolley.
02	Add products	Scan each product barcode or QR code. Check that its name and price appear in your cart.
03	Review your cart	Check item names, quantities, prices and the total.
04	Confirm the cart	Tap “Confirm cart”, review the summary, then tap “Confirm”.
05	Choose how to pay	Choose Cash, UPI or QR, then tap “Confirm & pay”. Follow the instructions shown in the store.
06	Finish with the team	If payment says “Pending”, ask a store team member what to do next. Keep your order details available.

A quick note about scanning

A newly scanned item may briefly show “Adding”. Wait for the correct product name and price before relying on the cart total or confirming your cart.

1. Choose your trolley

Connect the app to the trolley you are about to use.

01	Tap “Scan Trolley QR”	Find the QR code attached to the trolley and hold it inside the camera view.
02	Allow camera access	If your phone asks, allow camera access so the app can scan the trolley code.
03	Check the trolley shown	When scanning succeeds, check that the trolley ID on the screen matches the trolley in front of you.
04	Enter a code if needed	If the QR code will not scan, type the printed trolley code into “Or enter trolley code” and tap “Use trolley code”.

Tips for a successful scan

Make sure the whole QR code is visible and the area is well lit. Use the Flash button if needed, or switch cameras with the camera-switch button. Move the phone slightly closer or farther away until the code is clear.

Trolley unavailable?

The trolley may already be in use. Try another available trolley or ask a store team member for help. If you already have items in your cart, use “Change trolley” rather than starting over.

2. Scan products into your cart

Items appear as you scan. Their confirmed names and prices may take a moment to show.

01	Tap “Scan Product”	Point the camera at the product barcode or QR code.
02	Check the new cart row	It may first say “Adding”. Once the store has checked the scan, the product name, pack and price appear.
03	Scan the next item	You can continue with another scan while earlier scans finish. The total updates as each scan is completed.
04	Adjust the quantity	Use the + and – controls in the product row. Reducing the quantity to zero removes that item from the cart.

If an item could not be added

If you see “Could not add product” or “Retry”, tap “Retry” on that item. If you do not want it, use the × button to remove that failed scan. A failed scan is not included in your cart.

Before trusting the total

Check each product name and unit price against the item you picked up. If the total says it is updating, wait until it finishes. You cannot continue to payment while a scan is still pending or has failed.

3. Review your cart and choose payment

Confirm the products and total before you continue.

01	Tap “Confirm cart”	The app shows an item count and total. Tap “Review cart” to go back, or “Confirm” to continue.
02	Choose a payment option	Select Cash, UPI or QR in the payment sheet.
03	Minimize payment if needed	Tap the down arrow to minimize the payment sheet. Tap “Continue payment” at the bottom of the screen to return to it.
04	Tap “Confirm & pay”	Wait for the result. If an error appears, read it and follow the instructions before trying again.

Important: “Pending” does not mean paid

If the order screen says the payment is “Pending”, payment still needs to be completed or confirmed. Follow the store team’s instructions. The app offers Cash, UPI and QR; it may not show a separate payment-confirmation screen.

On the order screen, check the Order ID, payment status, order status and amount. Show the Order ID to a team member if you need help.

4. Change your trolley or stop shopping

Choose the right option if your trolley is damaged or you need to leave.

Change to another trolley

01	Tap “Change trolley”	Choose whether the trolley is damaged or you simply need a different trolley.
02	Scan the replacement	Scan the QR code on an available replacement trolley. If it cannot be used, try another or ask a team member.
03	Move your items first	Read the confirmation carefully. Physically transfer every item from your cart to the new trolley, then tap “Transfer & switch”. Your cart stays active.

Cancel shopping before checkout

01	Tap “Cancel shopping”	Choose the reason: changed your mind, damaged trolley, or need to leave.
02	Review the warning	This ends your current shopping and cart. Tap “Cancel session” to confirm, or “Keep shopping” to go back.
03	Return the trolley	Give the trolley to a store team member. It is not released for reuse until staff checks it in.

Changing a trolley keeps your cart; cancelling ends it

A damaged trolley should be handed to a team member and reported. Do not leave a trolley that the app asks you to return.

5. Cancel an order and return a trolley

After checkout, use the order status to decide what to do next.

01	Check the order status	"Cancel pending order" is shown only while payment is pending and the order is waiting for payment.
02	Review before cancelling	Read the order amount and reason, then confirm the cancellation. Wait for the app to confirm that it was accepted.
03	If payment is already confirmed	You cannot cancel a paid order in the app. Contact a store team member for help with the order or a refund.
04	Hand back the trolley	If the app asks you to return the trolley, give it to a team member and wait for them to check it in.

No "Cancel pending order" button?

The order may already be paid or being processed. Do not try to place the order again. Show the Order ID to a team member and ask for help.

After a cancellation or trolley change, the app may continue reminding you to return the old trolley. Staff must receive and inspect it before it can be used again.

Quick help and common questions

Read the message on the screen and avoid tapping the same action repeatedly.

What you see	What to do
Trolley QR will not scan	Check camera access and lighting. Show the whole QR code, try the Flash or camera-switch button, or enter the printed trolley code.
An item still says “Adding”	Wait for the product name and price. If the total is updating, wait before confirming. If it takes too long, tap Refresh to check the latest cart.
“Retry” or “Could not add product”	Tap Retry on that item. Check that the barcode is clear. Use × to remove a failed scan you do not want.
Trolley unavailable	Try another trolley or ask a team member. Do not start a new cart if you need to keep your current items; use Change trolley.
Payment or order error	Read the message and check whether an order was created before trying again. Refresh and check your order details. Ask staff if you are unsure.
App asks you to return a trolley	Give the trolley to a store team member. The reminder may stay visible until staff has checked in the trolley.

What does Refresh do?

Refresh updates the cart, order and trolley-return information shown in the app. It does not complete a payment or check a trolley back in.

For faster help, show a team member your Order ID, trolley ID and the message on your screen.
